Goulmy EAJM, Hunt DF, Engelhard VH;

WPI; 1999-153312/13.

A new minor histocompatibility antigen, diseases and prevent rejection and host marrow and organ transplantation. HA-1 - useful to treat immune versus graft disease in bone

Disclosure; Page 15; 47pp; English.

The present sequence represents a new peptide (P1) constituting a T-cell epitope obtainable from the minor histocompatibility antigen HA-1. The peptide is immunogenic and can be used as part of a vaccine. P1 is used as a medicine, to induce tolerance for transplants, prevent rejection and/or graft versus host disease, or to treat (auto) immune diseases. In particular it can be used with bone marrow transplantation, in the treatment of severe aplastic anaemia, leukaemia, and immune deficiency diseases

                                                                                                                                                                                                                 The present sequence represents part of the minor histocompatibility antigen HA-1 R-allele. The specification describes methods for typing alleles (preferably the H and R alleles) of the minor histocompatibility antigen HA-1 in a sample, which comprise detecting polymorphic nucleotides in the cDNA or genomic nucleic acids of the alleles. The methods can be used for HA-1 typing for bone marrow transplants, severe aplastic anaemia, leukaemia and immune deficiency diseases, as well as detection of genetic aberrances. The probes and primers of the invention can be used to screen for the HA-1 alleles. The HA-1 peptides can be used anti-idiotypic B cells and/or T cells and antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Intron; minor histocompatibility antigen HA-1; typing allele; H allele; R allele; polymorphic nucleotide; HA-1 typing; bone marrow transplant; severe aplastic anaemia; leukaemia; immune deficiency disease; ss.

A protein of the invention has CC tytostatic activity, and may have a use in a vaccine. The method is CC useful for generating a SNP profile of one or more individuals from a CC individuals, where the SNP profile was related to disease, preferably CC cancer. This is useful for diagnosing a disease in an individual by cancer. This is useful for diagnosing a disease in an individual by cancer. This is useful for diagnosing a disease in an individual by cancer. This is useful for diagnosing a disease in an individual by cancer. This is useful for diagnosing a disease. The preferably concerns the snP-related polymorphic profile. A method of the invention consistent and treating cancer, preferably leukaemia, and for determining the progression, regression or onset of a treated disease. The present of the progression is used in the exemplification of the invention.

                                                                                                                                                                                                                                                                               AAW97414 standard; protein; 13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes a new peptide (P1) constituting a T-cell epitope obtainable from the minor histocompatibility antigen HA-1. The peptide is immunogenic and can be used as part of a vaccine. P1 is used as a medicine, to induce tolerance for transplants, prevent rejection and/or graft versus host disease, or to treat (auto) immune diseases. In particular it can be used with bone marrow transplantation, in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A new minor histocompatibility antigen, HA-1 - useful to treat immune diseases and prevent rejection and host versus graft disease in bone marrow and organ transplantation.
                                                                                                                                                                                                                                     20-MAY-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 13
                                                                                                                                                                                                                                                                                                                                                                                                                                                 treatment of severe aplastic anaemia, leukaemia, and immune deficiency diseases. The present sequence represents a KIAA0223 sequence given in the present invention

The present sequence represents a new peptide (P1) constituting a T-cell epitope obtainable from the minor histocompatibility antigen HA-1. The peptide is immunogenic and can be used as part of a vaccine. P1 is used as a medicine, to induce tolerance for transplants, prevent rejection and/or graft versus host disease, or to treat (auto) immune diseases. In particular it can be used with bone marrow transplantation, in the
                                                                                                                                                                                                                                                               A new minor histocompatibility antigen, diseases and prevent rejection and host marrow and organ transplantation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents the KIAA0223 polymorphism in HA-1 negative homozygous individuals. The specification describes an immunogenic peptide constituting a T-cell epitope, obtainable from the minor histocompatibility antigen HA-1. The peptide can be used in vaccines or pharmaceutical formulations as medicines to induce tolerance for transplants so as to prevent rejection and/or Graft-versus-Host Disease, or to treat autoimmune diseases. Neoplastic haematopoietic cells presenting the peptides, in an HIA class I context, can be eliminated after specific recognition of the peptides. The peptides can also be used to raise antibodies, T-cell receptor, B- and T-cells
                                                                                                                                                                                                                Claim 3;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAW97375 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         HA-1 H-allele sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         13-MAY-1999
                                                                                                                                                                                                                                            The present sequence represents part of the minor histocompatibility antigen HA-1 H-allele. The specification describes methods for typing alleles (preferably the H and R alleles) of the minor histocompatibility antigen HA-1 in a sample, which comprise detecting polymorphic nucleotides in the cDNA or genomic nucleic acids of the alleles. The methods can be used for HA-1 typing for bone marrow transplants, severe aplastic anaemia, leukaemia and immune deficiency diseases, as well as detection of genetic aberrances. The probes and primers of the invention can be used to screen for the HA-1 alleles. The HA-1 peptides can be used anti-idiotypic B cells and/or T cells and antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WO9905313-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Typing minor histocompatibility antigen HA-1 - by amplifying and identifying HA-1 R and HA-1 H alleles of HA-1, used for, e.g. de of genetic aberrances.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   23-JUL-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel method for providing epitopes of allelic CC variants of antigenic proteins from specific species based on single CC nucleotide polymorphism (SNP), by defining target protein/peptide or its subset, screening database of DNA encoding target protein flentifying, CC selecting allelic peptide/protein variants, expression product or its CC fragment encoded by DNA sequence having SNP, creating variant epitopes, CC selecting epitopes binding to MHC protein. A protein of the invention has CC cytostatic activity, and may have a use in a vaccine. The method is CC individuals from a SNP profile of one or more individuals from a CC individuals, where the SNP profile was related to disease, preferably CC cancer. This is useful for diagnosing a disease in an individual by cancer. This is useful for diagnosing a disease in an individual by cancer. This is useful for diagnosing a disease in an individual by cancer. This is useful for diagnosing a disease in an individual by cancer. This is useful for diagnosing a disease in an individual by cancer in the snP-related polymorphic profile. A method of the invention is useful for transplanting haematopoietic stem cells from a donor to a constitution of the progression, regression or onset of a treated disease. The present concerns used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                    ঠ

The peptide is immunogenic and can be used as part of a vaccine. P1 is used as a medicine, to induce tolerance for transplants, prevent rejection and/or graft versus host disease, or to treat (auto) immune diseases. In particular it can be used with bone marrow transplantation, in the treatment of severe aplastic anaemia, leukaemia, and immune deficiency diseases. The present sequence represents a KIAAO223 sequence given in

A new minor histocompatibility antigen, {\rm HA-1} - useful to treat immune diseases and prevent rejection and host versus graft disease in bone
                                                                                                                                                                                                                                                                                                                               Minor histocompatibility antigen; HA-1; T-cell epitope; immunological; graft versus host disease; bone marrow transplant; leukaemia: vaccina.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents the KIAA0223 polymorphism in HA-1 positive homozygous individuals. The specification describes an immunogenic peptide constituting a T-cell epitope, obtainable from the minor histocompatibility antigen HA-1. The peptide can be used in vaccines or pharmaceutical formulations as medicines to induce tolerance for transplants so as to prevent rejection and/or Graft-versus-Host Disease, or to treat autoimmune diseases. Neoplastic haematopoietic cells presenting the peptides, in an HIA class I context, can be eliminated after specific recognition of the peptides. The peptides can also be used to raise antibodies, T-cell receptor, B- and T-cells
                                                                  Goulmy EAJM,

The peptide is immunogenic and can be used as part of a vaccine. P1 is used as a medicine, to induce tolerance for transplants, prevent rejection and/or graft versus host disease, or to treat (auto) immune diseases. In particular it can be used with bone marrow transplantation, in the particular it can be used with bone marrow transplantation, in the particular it can be used with bone marrow transplantation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence

medicines to induce tolerance for transplants so as to prevent rejection and/or Graft-versus-Host Disease, or to treat autoimmune diseases. Reoplastic haematopoietic cells presenting the peptides, in an HLA class I context, can be eliminated after specific recognition of the peptides. The peptides can also be used to raise antibodies, T-cell receptor, B-and T-cells

                                                                            cc encoding 11 separate viral proteins: non-structural proteins NS-1 (also CC known as the 1C protein) & NS-2 (1B protein), a polymerase protein L and CC eight structural proteins preferably G, also M, M2-1, M2-2, N, P, F, and CC eight structural proteins preferably G, also M, M2-1, M2-2, N, P, F, and CC expressition comprising an above peptide mixed with a pharmaceutical CC excipient or an RSV immunogenic composition comprising a recombinant CC expression vector with a nucleic acid insert encoding an above peptide. CC The present invention describes an in vitro method of detecting cytotoxic CC Tymphocytes (CTLs) that respond to a major histocompatibility complex CC (MHC) class I restricted T-cell stimulating peptide epitope of RSV. The CC (MHC) class I restricted T-cell stimulating peptide epitope of RSV. The CC (prophylactic or therapeutic) vaccine composition for a NNA-based CC immunisation, or for preparing an immune response provoking vaccine in CC the event of RSV infection (the vaccine being prepared by contacting the CC polypeptide in an immune response provoking vaccine; This cappitide sequence is a human RSV high binding affinity peptide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches

This invention relates to novel isolated or purified peptides of the CC human respiratory syncytial virus (RSV), in particular ten RSV genes CC encoding 11 separate viral proteins non-structural proteins NS-1 (also CC known as the 1C protein) & NS-2 (1B protein), a polymerase protein L and CC eight structural proteins preferably G, also M, M2-1, M2-2, N, P, F, and CC composition comprising an above peptide mixed with a pharmaceutical CC excipient or an RSV immunogenic composition comprising a recombinant CC expression vector with a nucleic acid insert encoding an above peptide. CC Tlymphocytes (CTLs) that respond to a major histocompatibility complex (CMHC) class I restricted T-cell stimulating peptide epitope of RSV. The CC (prophylactic or therapeutic) vaccine composition for a DNA-based CC immunisation, or for preparing an immune response provoking vaccine in the event of RSV infection (the vaccine being prepared by contacting the

Patent No. 6678375
GENERAL INFORMATION:
APPLICANT: Rijksuniversiteit Te Leidin
APPLICANT: Hunt, Donald F
APPLICANT: Hunt, Donald F
APPLICANT: Hard, Victor H
TITLS OF INVENTION: The HA-1 Antigen
FILE REFERENCE: 2183-4285US
CURRENT APPLICATION NUMBER: US/09/489,760
CURRENT APPLICATION NUMBER: US/09/489,760
CURRENT APPLICATION NUMBER: PCT/NL98/00424
EARLIER APPLICATION NUMBER: PCT/NL98/00424
EARLIER FILING DATE: 198-07-23
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              US-09-489-760-5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   US-09-269-250E-18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT 1

Patent No. 6878375

Patent No. 6878375

GENERAL INFORMATION:
APPLICANT: Rijksuniversiteit Te Leidin
APPLICANT: GOLINY, Elsa A.J.M

APPLICANT: Hunt, Donald F

APPLICANT: Hard, Victor H

APPLICANT: Hard, Victor H

TITLE OF INVENTION: The HA-1 Antigen

TITLE OF INVENTION INDEER: US/09/489,760

CURRENT FILING DATE: 2000-01-21

CURRENT FILING DATE: 1998-07-23

NUMBER OF SEQ ID NOS: 16

SOPTWARR: DATESTIN OF SERVICES OF OF SERV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RESULT 5

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score
